

# It's not calm!

## The 1.5°C target has been exceeded for two full years.

The average temperature for 2024 was a record high, 1.62°C above pre-industrial levels. 2023 was the second warmest at 1.54°C and 2025 at 1.44°C was the third warmest year in modern times despite the end of El Niño. Source: Berkeley Earth (berkeleyearth.org).

## Selected damaging effects of global warming:

- Every tenth degree of global warming **increases the damage from extreme weather events** such as **heat waves, droughts, fires, heavy rains and floods**. Warming also makes the weather **less predictable**.
- **Damage to biodiversity and ecosystems** as well as to **food and water supplies and human livelihoods** becomes evident at 1.5°C and becomes increasingly greater at 2°C and higher.
- At 5-6 degrees of warming, geological findings indicate a risk of catastrophic mass extinction, such as 251 million years ago when **95% of life on land and in the world's oceans became extinct**, due to, among other things, extreme drought and warm, oxygen-poor seas.

# Climate action NOW, autumn 2026!

We urge the political leadership in Umeå to take greater responsibility:

- Emissions must be significantly reduced in 2026: prioritize measures that have a quick effect
- **Cheaper tickets and more accessible buses**, especially in winter!
- **Establish a Car Free Zone or Environmental Zone Class 3** in Umeå:

Many of us are worried about the climate and the global situation. We want to turn our concerns into a **common force**. Through conversations, study circles, lectures and meetings, we develop and can **influence the future!**

PeopleForFuture is every Friday at Rådhusorget at 12-13:30

We have study circles every week - Contact: [jens.rundberg@gmail.com](mailto:jens.rundberg@gmail.com)
